# Private or Public

Look at the pieces of personal information. Are some more sensitive than others? Are some more private than others? Which would we be happy to have in the public domain and freely shared?

Taking each situation in turn, mark on the grid where you think it lies – for example point **X** shows a piece of personal information that is highly sensitive and should be kept private. Point **Y** shows a piece of personal information you would be happy to have in the public domain, easily accessed by lots of people.

X

Sensitive information

Private

Public

Non-sensitive information

Y
